

STRATEGY: CLOSING THE LOOP

With
this
plan, we
can see

In Phase 1, we focus on the most critical materials in our production chain for sustainability. We focus on the materials that are most critical to our business and have the highest impact on the environment.

Recycling: Materials are fed back into the production chain to reduce the need for virgin materials.

- ✓ Reduce waste and emissions
- ✓ Recover critical supply chain

KEEPING CRITICAL RAW MATERIALS IN CIRCULATION.

MECHANICS: RECOVERING VALUE.

In Phase 2, we focus on the most critical materials in our production chain for sustainability. We focus on the materials that are most critical to our business and have the highest impact on the environment.

During mechanical processing (Phase 2), we focus on the materials that are most critical to our business and have the highest impact on the environment.

Recovery: Materials are fed back into the production chain to reduce the need for virgin materials.

- ✓ Recover critical supply chain
- ✓ Recover critical supply chain

Recovery: Materials are fed back into the production chain to reduce the need for virgin materials.
